

Monitoring of the 2023 Financial Management Plan December 2025

Background

In between actuarial valuations, the Trustee monitors the financial position of the Scheme. This document provides details of the monitoring for the quarter ending 31 December 2025 based on the 2023 valuation. It follows the Financial Management Plan and monitoring framework which the Trustee has established for the Scheme.

The purpose of the monitoring is to indicate whether or not the Scheme's financial position is progressing as expected. It does not lead to any direct action from the Trustee other than potentially commissioning further analysis and advice.

Further, it should be noted that monitoring is not intended to answer the question: what are the contribution requirements if a valuation was undertaken at the monitoring date?

This document is published by the Trustee for information only and is not intended to be used as the basis for any decisions.

This document is issued by Universities Superannuation Scheme Limited (the "Trustee") in its capacity as the sole corporate trustee of the Universities Superannuation Scheme. The Trustee is making this document available for information purposes only and on a non-reliance basis. Nothing in this document constitutes advice. It is important that any person accessing this document takes their own professional advice on its contents. While the information in this document – including any assumptions and parameters upon which it is based - has been prepared in good faith, no representation, warranty, assurance or undertaking (express or implied) is or will be made by the Trustee in relation to the adequacy, accuracy, completeness or reasonableness of that information. Neither the Trustee nor its third-party advisors accept any liability to third parties in relation to the information in this document.

Monitoring of the 2023 Financial Management Plan

December 2025

Differences between monitoring and actuarial valuation

The monitoring approach is not as thorough as that adopted at an actuarial valuation and hence does not give the same outcome as would be given by an actuarial valuation at the effective date. This is for a number of reasons, including:

- While monitoring updates the main financial assumptions, these and other assumptions do not go through the same level of assessment as would be the case for an actuarial valuation. For example, when setting the mortality assumption at a valuation we would undertake a full review of the Scheme's experience, as well as considering other relevant evidence. Further, the assumptions used for monitoring do not necessarily reflect the risk capacity and appetite of employers at that date. A valuation also involves a full review of the covenant provided by the employers whilst our monitoring seeks only to capture any change in the covenant that requires further investigation. In practice for an actuarial valuation the Trustee's Integrated Risk Management Framework would also potentially influence the choice of assumptions.
- An actuarial valuation would require consultation with UCEA in relation to the assumptions used and the contributions payable; it is not possible to pre-judge the outcome of any such process.
- Any deficit recovery contributions needed would be based on additional factors, including the views of the Pensions Regulator.
- The calculations do not allow for new membership data, and contain some approximations relative to an actuarial valuation.

The monitoring position is relatively volatile from quarter to quarter, and in light of this the Trustee considers the overall history and trends since the valuation date rather than just the position at the monitoring date.

- Looking at the last quarter, the Scheme's funding position at the end of December was similar to that at the end of September. This was a result of a higher asset value but also a higher value of liabilities following a reduction in future expected returns, which also led to a slight increase in the future service contribution requirement compared to September.
- Since the March 2023 valuation date, market conditions have been favourable for the Scheme. This leads to a higher TP surplus when compared to the valuation date, allowing for benefit improvements granted on 1 April 2024, and a lower future service contribution requirement. The self-sufficiency funding position has also improved since the valuation date and now shows a surplus.

This is the Trustee's Financial Management Plan Monitoring report which is used by the Trustee to track the financial development of the Scheme.
It is published on our website for information only and is not intended to provide sufficient information to support any decision making.

QUARTER END FMP MONITORING REPORT - END DECEMBER 2025

Technical Provisions

£15.2bn Surplus

Valuation date (31/03/2023)	£7.4bn Surplus
Liability	£64.8bn
Pre-retirement discount rate	Gilts + 1.86%
Post-retirement discount rate	Gilts + 0.65%

Future Service Contribution Requirement

17.0%

Valuation date	20.6%
----------------	-------

IRMF - Actual Reliance

	31-Mar-23	31-Dec-25
Actual Reliance (£bn)	13.1	-1.5
% of AffRC	47%	-5%
RAG	Green	Green

Self-Sufficiency

£9.5bn Surplus

Valuation date	£5.1bn Deficit
Liability	£70.5bn
Discount rate	Gilts + 0.30%
Self-sufficiency VaR	£13.4bn

Future Service Contribution Requirement

Current RAG 17.0% (Green)

Last quarter-end (Sep-25) 15.9% (Green)

Trigger if Red for two quarters **No**

IRMF - Target Reliance

	31-Mar-23	31-Dec-25
Target Reliance (£bn)	20.5	13.7
% of AffRC	73%	49%
RAG	Green	Green

Assets

£80.0bn

Valuation date	£73.1bn
'Breakeven' discount rate	Gilts – 0.28% CPI + 1.78%

Investment Risk

The underlying Investment Risk metrics are all green (at last review)

RAG **Green**

Covenant

Unchanged

Valuation date Strong

Covenant: **Green**

Note: Affordable Risk Capacity is determined as the present value of 10% of salaries over 30 years. The 'Breakeven' discount rate is that at which the liability value equals the asset value.

QUARTER END FMP MONITORING REPORT - END DECEMBER 2025

Quarterly covenant monitoring update

SUMMARY The covenant remains Strong

- Rationale:
- No indication of significant weakening of financial position of employers that contribute the majority of employer risk capacity
 - Employer capacity to support risk remains in excess of Scheme reliance on employers

KEY DEVELOPMENTS

- The UK government published its delayed white paper on Post-16 Education and skills. The paper included 2 key financial proposals: (i) extension of annual indexation of home undergraduate tuition fees for inflation to the 2026/7 and 2027/8 academic years, with an intention to legislate for ongoing annual inflationary uplifts in subsequent years, legislative time permitting; (ii) confirmation of the government’s intention to introduce a levy on international student tuition fee income that had been outlined in the government’s May-25 Immigration white paper. The paper also outlined an expectation that universities become more efficient, more collaborative, more specialised, focused on delivering excellence, improved student outcomes and equality of educational access, and more closely aligned with enabling life-long learning. (Oct-25, Gov.uk)
- Details of how the proposed international fee levy is expected to work were released in the Budget in November: a flat rate tariff of £925 per international student (as opposed to the 6% levy on international fee income previously outlined in the Immigration white paper), to be levied on institutions from the start of the 2028/29 academic year (Gov.uk).
- Home Office data released in November showed an 8% y/y increase in study visa issuance in the 12 months to 30 Sept 25, the first y/y increase in 12-monthly issuance for 2 years. However, issuance to Chinese applicants was 14% lower y/y (7% y/y decline in the quarter to 30 June). The overall increase was driven by a rebound in issuance to Nigerian and Indian applicants and strong growth in issuance to applicants from Bangladesh, Nepal and Pakistan (Gov.uk). The data showed little impact from the tightening of Home Office study visa Basic Compliance Assessment (BCA) rules from September (as outlined in the earlier Immigration white paper). Several universities have reportedly responded to the tightening by halting student recruitment from markets with historically higher application failure rates (Dec-25, visahq.com).

ENGAGEMENT ACTIVITY (Not survey-related, # cases)	QTD	YTD 2025/26

QUARTER END FMP MONITORING REPORT - END DECEMBER 2025

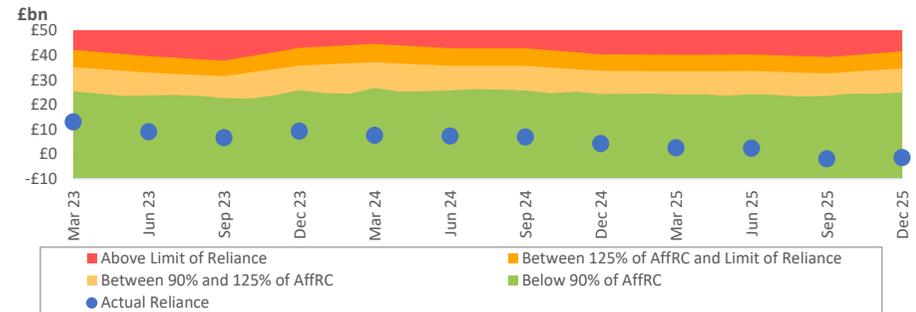

APPENDIX A - IRMF RAG rating definitions

Actual Reliance

Self-sufficiency liabilities + Transition Risk - Assets

- Green Less than or equal to 90% of Affordable Risk Capacity
- Lower Amber Between 90% and 125% of Affordable Risk Capacity
- Upper Amber Between 125% of Affordable Risk Capacity and Limit of Reliance
- Red Above Limit of Reliance (150% of Affordable Risk Capacity)

Actual Reliance

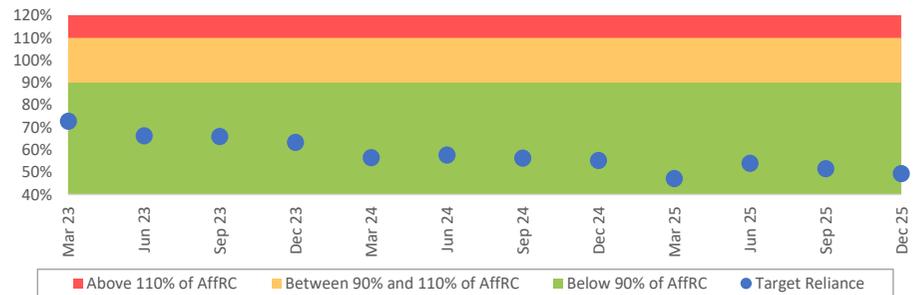

Target Reliance

Self-sufficiency liabilities + Transition Risk - Technical Provisions

- Green Less than or equal to 90% of Affordable Risk Capacity
- Amber Between 90% and 110% of Affordable Risk Capacity
- Red Above 110% of Affordable Risk Capacity

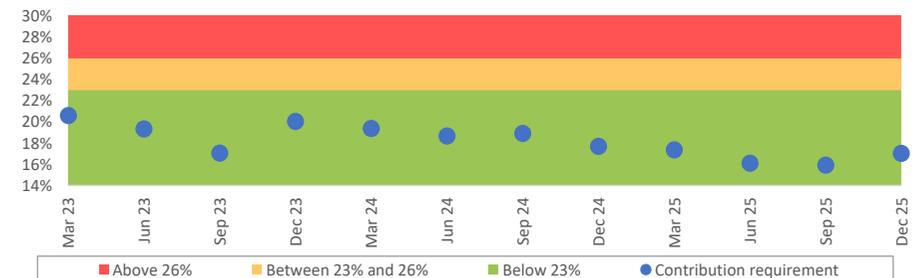

Target Reliance as % of Affordable Risk Capacity

Contribution Metric

- Green If the total contribution requirement is less than or equal to 23% (i.e. the current contribution rate plus a margin)
- Amber If the total contribution requirement is between 23% and 26%
- Red If the total contribution requirement is greater than 26%

Contribution Metric

The metric will be deemed to have triggered if ‘Red’ for two consecutive quarter-ends

This is the Trustee's Financial Management Plan Monitoring report which is used by the Trustee to track the financial development of the Scheme.
It is published on our website for information only and is not intended to provide sufficient information to support any decision making.

QUARTER END FMP MONITORING REPORT - END DECEMBER 2025

APPENDIX B - Investment Risk RAG rating definitions

1. Probability of Actual Reliance exceeding Limit of Reliance in three years

Green < 1%
Amber 1% - 5%
Red > 5%

2. (a) Probability of Actual Reliance exceeding Affordable Risk Capacity in three years

Green <10%
Amber 10% - 25%
Red > 25%

2. (b) Self-sufficiency funding deficit 1-year Value at Risk

Green < £20bn
Amber £20bn - £25bn
Red > £25bn

3. (a) Probability of the contribution requirement exceeding 26% in three years

Green < 15%
Amber 15% - 30%
Red > 30%

3. (b) Probability of TP full funding in 2032, allowing for contributions of 26% from 2026

Green > 70%
Amber 60% - 70%
Red < 60%

Overall Investment Risk Metric

Green Where the underlying metrics are all green
Amber Where at least one underlying metric is not green, but no underlying metrics have been red at two consecutive quarter ends
Red Where at least one particular underlying metric has been red for two consecutive quarter ends

QUARTER END FMP MONITORING REPORT - END DECEMBER 2025

APPENDIX C - Glossary and Definitions

(see also Appendix A – IRMF RAG rating definitions)

Affordable Risk Capacity	The present value of 10% of salaries over 30 years. In this calculation, the scheme's salary roll is assumed to increase by CPI+1% based on the TP CPI assumption shown on page 4. The present value of these salaries is then determined using the Affordable Risk Capacity discount rate shown on page 6.
Benefit improvement	The benefit improvements applicable to existing benefits agreed as part of the 2023 valuation: a) A one-off benefit uplift to all members that had a period of active service between 1 April 2022 and 31 March 2024 dependent on their status at 31 March 2024. The uplift on 1 April 2024 was set at £215 p.a. plus £645 lump sum for non-pensioners, £241 p.a. for pensioners and £108 p.a. for dependants where the associated member had active service between 1 April 2022 and 31 March 2024. b) An increase in the indexation cap on benefits accrued between 1 April 2022 and 31 March 2024 from 2.5% p.a. to the 'soft cap' approach that preceded it.
Breakeven discount rate	The discount rate at which the liability value equals the asset value at the applicable date.
CME	Capital Market Expectations. Expected returns on assets as determined by USS Investment Management, the Trustee's principal investment advisor.
Covenant RAG	Current view of the covenant relative to that at the last valuation assessed by the covenant team: Green - No apparent deterioration since the previous review. Amber - Potential deterioration due to emerging new and/or financial information. Red - Significant deterioration due to emerging news and/or financial information.
Duration	The average time in years until payments from the scheme are expected to be made, weighted by the value of those payments. The TP duration statistic takes into account all benefits which have been accrued as at the calculation date.
Funded Status	The value of assets divided by the value of liabilities, expressed as percentage.
Market implied CPI	Calculated as the difference between index-linked and nominal gilt yields, less an RPI/CPI wedge. The RPI/CPI wedge is advised by the Scheme Actuary; since March 2024 this is 80bps up to 2030 and 20bps thereafter.
Self-sufficiency VaR (Value at Risk)	The increase in self-sufficiency deficit over a one-year period, in a 1-in-20 downside event (i.e. 95% of outcomes over a one-year time period would not lead to this increase).

This is the Trustee's Financial Management Plan Monitoring report which is used by the Trustee to track the financial development of the Scheme. It is published on our website for information only and is not intended to provide sufficient information to support any decision making.

QUARTER END FMP MONITORING REPORT - END DECEMBER 2025

APPENDIX C - Glossary and Definitions (continued)

Single Equivalent (SE)	<p>The rate which leads to the same liability by using the same flat discount rate throughout rather than individual year-by-year rates or different pre- and post retirement discount rates.</p> <p>For the single equivalent of market indices, the 'discount rate' is the relevant market index, and for gilts+ or CPI+ the single equivalent is the flat margin above the gilt or CPI curve.</p> <p>The cashflows for calculating the liability are generally the past service Technical Provisions cashflows. For the single equivalent discount rate we also calculate using the 1-year future service cashflows which leads to a different result due to the different shape of the cashflows.</p>
TP Sensitivity	<p>Within the FMP monitoring report, this is the amount that the Technical Provisions liability would change following a +0.1% change in discount rates.</p>
Valuation Investment Strategy (VIS)	<p>The scheme's broad investment strategy, set out as a theoretical, but investible, asset allocation.</p> <p>It should be noted that the VIS is not intended to be the actual implemented investment strategy, but it does serve as a guide to the construction of the implemented portfolio. The implemented portfolio can differ from the VIS (within limits), as USS Investment Management finds opportunities in the financial markets to use its discretion to add value and improve risk-adjusted returns. The implemented portfolio operates within the same risk and return envelope as the VIS.</p>
